Executive Technical Summary

I am a Senior Software Engineer and Architect with a 20-year career defined by a strategic evolution from IT leadership to high-stakes distributed systems engineering. Following a pivotal transition in London in 2012, I moved from a CIO role in civil engineering to the forefront of the cloud-native revolution. I offer over 10 years of professional expertise in Go and am currently delving into low-level systems programming with Rust to build the next generation of performant, safe distributed systems. My unique value proposition lies in my dual-track mastery of software engineering and DevOps orchestration, allowing me to bridge the gap between complex application logic and global-scale infrastructure. Beyond technical contributions, I have expanded my impact through the creation and leadership of regional tech communities.

Core Technical Competencies

Category	Primary Technologies	Secondary/Legacy Experience
Languages	Go, Rust, TypeScript, Shell Scripting	PHP, J2EE, C/C++, Javascript (Vue, Angular, Polymer, NodeJS)
Infrastructure & DevOps	Kubernetes, Terraform, Docker, Google Cloud, AWS, Jenkins, Ansible, Helm	Salt, Sops, Terragrunt, LXC, Rackspace
Data Persistence	Google Spanner, CockroachDB, PostgreSQL, MariaDB	MongoDB, Redis, MySQL, SQL Server, Sybase IQ
Systems & Messaging	Distributed/Decentralized systems, Linux, S3-compatible storage	RabbitMQ, Windows Server, Active Directory, OpenSSL

Professional Experience

Senior Software Engineer (Infrastructure & Traversal), Storj Labs

April 2019 – Present | Remote

- Ecosystem Expansion:** I independently implemented the Uplink Rust bindings, significantly lowering the barrier to entry for Rust developers to integrate with the Storj decentralized network.
- Architected Global Scalability:** I spearheaded the software's evolution from alpha to production-grade decentralized S3-compatible storage, supporting a worldwide network of storage nodes.

- **Orchestrated Critical Migrations:** I led the multi-stage architecture and migration of global storage metadata from PostgreSQL to CockroachDB and subsequently to Google Spanner to ensure massive horizontal scalability.
- **Senior Software Engineer** (*April 2019 - Oct 2020*): I joined the company to work on the first production version. I participated in the early design of some parts of the system (backend) and their implementation (Go).
- **Infrastructure-as-Code Leadership** (*Oct 2020 – Oct 2022*): I pivoted to the Infrastructure team to codify global environments using Kubernetes, Terraform, Helm, and Salt, while developing proprietary internal tools (Go), to automate company-wide operational needs.
- **Traversal & Product Integration** (*Oct 2022 – April 2025*): I formed the Traversal team to provide cross-functional engineering support with the development of backend features (Go), and utilized Ansible, Terragrunt, and Shell scripting to align infrastructure with vertical product goals.
- **Metadata Server Team** (*April 2025 – Feb 2026*): I joined one of the metadata server (a main component of the Storj decentralized storage network) teams to participate in the design and development (Go) of optimizations to sharpen the storage product.
- **Console Team** (*Feb 2026 – Present*): I joined the console team to contribute to design documents, backend (Go), and frontend adjustments (TypeScript, Vue) of new client-facing product features.

Senior Software Engineer, Cycloid

January 2017 – April 2019 | Remote

- **Founding Engineer:** I served as the first full-time hire for an open-source-based DevOps platform, instrumental in defining the company's early engineering culture.
- **Full-Stack Architecture:** I bootstrapped the frontend architecture using VueJS and co-designed the high-performance Go-based backend to facilitate streamlined application deployment for developers.

Senior Software Engineer, Xact LLC

March 2016 – December 2016 | Remote

- **Microservices Orchestration:** I built a high-availability registration platform for global sporting events using a Go-kit microservices architecture and PostgreSQL.
- **Legacy Transformation:** I directed the modernization of core participant tracking systems, implementing Go on the backend and modernizing the UI with Angular and Polymer.

Senior Software Engineer, Visii

October 2013 – January 2016 | London, UK & Remote

- **High-Compute SaaS:** I developed core SaaS systems handling massive traffic and computational loads to deliver visual discovery algorithms at scale.
- **Messaging & POCs:** I engineered research-based proof-of-concepts for patented visual discovery technology using NodeJS, Go, and RabbitMQ to secure investor partnerships.

Software Engineer, iWaz.at

October 2012 – October 2013 | Birmingham, UK

- **Startup Bootstrapping:** I acted as the sole engineer responsible for the entire technical lifecycle of an event application platform, from tech stack selection (NodeJS, MongoDB, Redis) to MVP deployment on AWS and Rackspace.

CIO of Barcelona HQ, Esteyco S.A.P

November 2007 – February 2012 | Barcelona, Spain

- **Strategic IT Leadership:** I directed IT strategy, budget negotiations, and international department-wide project management for a global civil engineering firm.
- **System Administration:** I overhauled and managed complex Windows Server environments, Active Directory, and global VPN networks.

Early Career

2004 – 2007 | Barcelona, Spain

- **Esteyco** (*Junior Systems Administrator*) - 1 year: I managed the Barcelona HQ systems and provided IT support.
- **DMAG** (*Junior Software Engineer & Researcher*) - 1 year: I developed cryptographic proof-of-concepts for digital rights management and security research, utilizing C, C++, and OpenSSL.
- **MGS** (*Junior Software Engineer*) - 2 years: I executed technical specifications and J2EE development for large-scale insurance sector projects using SQL Server.
- **Ofiexpers** (*Digital transformation lead*) - 6 months: I was the first hire to lead the digital transformation of the organization. I promoted the digitalization of the central office and launched the e-commerce site.

Technical Leadership & Community Advocacy

- **Founder & Leader:** I established Rust Girona and Silicon Girona, creating vital networking and growth hubs for the regional tech ecosystem.
- **Incoming President of GeeksCAT:** I was appointed to lead the organization (effective December 2025) to further the development of the Catalan technology community.
- **Strategic Advocate:** I regularly mentor and promote best practices in software architecture and distributed systems within the Girona tech community.

Engineering Philosophy & Motivations

- **Software Excellence:** I maintain a relentless commitment to the "Clean Code" movement, prioritizing Architecture, Maintainability, and Test-Driven Development (TDD) as the foundations of reliable software.
- **Continuous Evolution & The 2012 Pivot:** I am motivated by a lifelong learning mindset, exemplified by my 2012 transition to the London tech scene to master NodeJS and NoSQL, and my

current deep dive into Rust for its safety and performance benefits in distributed contexts.

- **Open Source Advocacy:** I am dedicated to the open-source ethos, contributing to some community projects.
-

Education & Qualifications

- **Degree:** BSc in Computer Science, Pompeu Fabra University (UPF).
 - **Continuous Education:** Software & Systems Architecture, Advanced Software Engineering, and Strategic Leadership/Management.
 - **Languages:** Native fluency in Spanish and Catalan; Professional fluency in English (Daily professional use for 12+ years).
-

Administrative Information

I am a Spanish citizen with the full right to work within any European Union country without restriction.
